Griffin Hammond has seen it all covering the unprecedented presidential campaign for Bloomberg Politics.
FirstWord

Each August brings a renewed energy to campus.

While summers at Illinois State are always active with classes and faculty research, youth camps, Preview groups and performances, nothing compares to having the full student body back for the start of a new academic year.

I purposefully block off time on my calendar to walk the Quad and visit residence halls as move-in occurs. It is always a joy to welcome students and mingle with parents, sharing in their excitement while assuring them that the collegiate journey will indeed be challenging but also rewarding and memorable.

There are no words to adequately describe the impact Illinois State will have on each family and especially individual students as they form lifelong friendships while cementing professional paths.

The students, likewise, by their very presence impact the surrounding community in ways that are not easily recognized yet incredibly significant. Illinois State creates an economic ripple in Central Illinois that too few understand or appreciate.

A study completed by two faculty members reveals that the University’s students and employees contribute more than $550 million to the local economy. In addition, more than $18 million in tax revenue is generated by Illinois State.

These staggering totals result from the fact ISU is one of the largest employers in McLean County, with 3,560 faculty and staff. The $550 million stems from payroll expenditures, general operating expenses, capital expenditures, and student spending beyond tuition and fees.

Last year alone, spending by and because of the University resulted in $16 million in property tax revenue, with an additional $2.6 million in sales tax revenue to the local economy.

There is a more thorough explanation of how Illinois State is crucial to the financial health and growth of the local community and county in the news section of this issue. Please pause to read the article and further understand the findings.

I share them because typically the University is considered in terms of how our mission to learn and teach changes the lives of our students. There will indeed be transformation in those enrolled during the upcoming academic year through classroom challenges, civic engagement and personal enrichment.

The University’s reach does not, however, stop with our students and their academic pursuits. ISU is a powerful force well beyond campus boundaries, creating opportunities that empower our community and state.

Larry H. Dietz, Ph. D.
President, Illinois State University
FEATURES

8 Capturing the candidates
Communication graduate Griffin Hammond has had a front-row seat to the political drama of both Democrats and Republicans. His work covering the presidential campaign for Bloomberg Politics has taken him behind the scenes in an election season unlike any other.

12 Recruiting graduates
ISU is in the top 10 percent of universities across the country for a graduation rate far above average. The explanation ties back to individualized attention and a collaboration across campus to see students succeed.

16 Somber memories
No one can forget where they were on the day of the 9/11 terrorist attacks. Certainly not FBI agent Louis Bladel ’89, who worked the scene in New York. He vividly recalls the day America changed.

20 A glimpse back
Demolition of the South Campus residence halls was completed over the summer. Mementos buried in two time capsules and found during the removal process provide a lasting sense of campus life decades ago.

22 Paradigm shift
There are more than 375,000 children in foster care across the country. Most will be placed in multiple homes before reaching 18. Many will struggle for a lifetime. Alumna Amelia Franck Meyer is a national leader with a plan to improve the system.

On the cover: Videographer Griffin Hammond has overcome exhaustion and frustration to stay up close to the candidates as they cross the country.
S
pending by Illinois State Uni-
versity, its employees and stu-
dents directly contributes more
than $550 million to the local
McLean County economy and more
than $18 million in tax revenues.

In simple terms, $1.50 is returned to
the McLean County economy for every
$1 expended by Illinois State and its fac-
culty, staff and students.

These are the findings of an eco-
nomic impact study conducted by Eco-
nomics professors Hassan Mohammadi
and Frank Beck, who directs ISU’s Ste-
venson Center for Community and Eco-
nomic Development.

Illinois State is the second largest
employer in the county with 3,560 fac-
culty and staff. The University contrib-
utes more than $550 million through
payroll expenditures, general operating
expenses, capital expenditures, and stu-
dent spending beyond tuition and fees.

The money spent has a secondary
effect of creating more than 8,900 county
jobs. Spending by local businesses and
their employees pumps more than $278
million into the area economy.

The spending power of college-age
students is part of the equation. Illinois
State had an on-campus enrollment of
20,615 last fall. The study considered
the off-campus spending by freshmen
and sophomores who live in universi-

Economic force
Illinois State crucial to local financial health, growth

Educational expenditures, general operating
expenses, capital expenditures, and student
spending beyond tuition and fees.

The money spent has a secondary
effect of creating more than 8,900 county
jobs. Spending by local businesses and
their employees pumps more than $278
million into the area economy.

The spending power of college-age
students is part of the equation. Illinois
State had an on-campus enrollment of
20,615 last fall. The study considered
the off-campus spending by freshmen
and sophomores who live in university
residence halls. Local spending by upperclassman and graduate students
was noted as well, including apartment
rental, groceries, books and transpor-
tation. Only students from hometowns
outside the county were included.

Illinois State’s payroll expenditures,
operating and capital expenditures and
student spending generate millions of
dollars in tax revenues that support local
governments and schools. In fiscal year
2015, spending by and because of the
University returned $16 million in prop-
erty tax revenue and $2.6 million in sales
tax revenue to the local economy.

“One-third of the $16 million
in property tax revenue comes from stu-
dent spending,” Beck said. “This is an
important contributor to the economic
health of McLean County because the
money is coming into our area from oth-
ner parts of Illinois, and from other states
and nations around the world.”
Physics faculty named Distinguished Professor

Physics Professor Q. Charles Su has been named a Distinguished Professor, which is ISU’s highest faculty honor. He has previously received the Teaching Initiative Award, Outstanding College Research Award, and Outstanding University Researcher Award.

Su joined the department in 1994 and was named a University Professor in 2011. A Fellow of the American Physical Society, he has received more than $2.4 million in external funding for research recognized internationally.

Su has pioneered the numerical approach to study how particles interact with intense laser fields. The model 1D atom that he invented with his colleagues has been copied worldwide.

His research includes discovery of the atomic stabilization phenomenon during photo-ionization of atoms, discovery of cycloatom states, creation of computational quantum field theory and resolution of the so-called Klein paradox.

Su’s focus on undergraduate research has made an incredible impact on students, who have produced more than 300 conference presentations and 66 co-authored publications.

Child Care Center gains rating of excellence

ISU’s Child Care Center has earned accreditation from the National Association for the Education of Young Children, which is the country’s leading organization of early childhood professionals.

“We’re proud to have earned the mark of quality and to be recognized for our commitment to reaching the highest professional standards,” said Child Care Center Director Carrie Carlson.

The center provides childcare services for children of ISU students, faculty and staff. It serves as a working illustration of early childhood best practices by collaborating with families, the University and community, all while utilizing the best current research and practice within the early childhood profession.

The five-year accreditation affirms that the center offers engaging classrooms, enhanced relationships and rich experiences for students. To earn the credential required a self-study measuring the program against the association’s 10 early childhood program standards and more than 400 related accreditation criteria. A site visit was also completed.

Online nursing program ranks among nation’s best

Mennonite College of Nursing’s online program is ranked as one of the best in the nation according to U.S. News & World Report. The publication defines a nursing-distance education program as one where all required, nonclinical classes can be completed via distance-education courses using Internet-based learning technologies.

This is the second year the online nursing systems administration program has been ranked. The dedication of faculty and their commitment to provide students individualized attention—even with the program being online—is just one reason the program is successful.

Schools were ranked in five general categories including student engagement, faculty credentials and training, peer reputation, student services and technology, and admissions selectivity. Other considerations included graduation rate, class size, tenured faculty and student debt.

ISU praised nationally for transfer student care

The University is one of only 40 schools from across the nation to be included in Phi Theta Kappa’s inaugural Excellence in Community College Transfer Honor Roll. The list identifies four-year colleges and universities that offer exemplary support for community college transfers.

ISU welcomes more than 2,000 transfer students each year. Approxi-
Where are they now?

Larry Quane ’66 became a faculty member in the Department of Industrial Technology in 1967. Returning to campus one year after he earned an undergraduate degree in mathematics, Quane taught safety courses while completing his doctorate at Michigan State University.

While he enjoyed teaching and rose to full professor, much of Quane’s 42-year Illinois State career involved working with students at an administrative level. He managed the academic probation and reinstatement of students and also developed a variety of student academic support services.

Quane worked in the provost’s area as an assistant and associate dean of undergraduate instruction before serving as acting chair for Criminal Justice Sciences. Among his many other administrative roles were associate dean and acting dean of the College of Applied Science and Technology, director of University College, acting University Registrar and acting executive director of Extended University.

“I was fortunate to be able to contribute to the University in a lot of ways,” Quane said of the various positions. He counts shifting registration, grade reporting and the degree audit system online while registrar and the development of University College among his most significant actions.

Quane was also actively involved in campus shared governance prior to his retirement in 2009. He served on the Academic Senate four years in various roles, including as chair. He engaged with ISU’s governing board as well as a member of the Joint University Advisory Committee to the Board of Regents.

A member of the University’s golf team while an undergraduate, Quane remains faithful to Redbird Athletics. He has been a member of the official bench crew for women’s basketball and volleyball for more than 30 years. His service was recognized with induction into the Illinois State Athletics Percy Family Hall of Fame in 2014.

A resident of Normal with his wife, Sue, Quane chairs Illinois State credit union’s board of directors. He is frequently found at ISU’s Weibring Golf Club and enjoys his family, which includes two adult sons and twin grandchildren.

He can be reached at lquane@ilstu.edu.

Language teacher program lauded for global initiative

The American Council on the Teaching of Foreign Languages has recognized ISU’s language teacher education program for global engagement. The University is one of only 11 language teaching programs in the nation to receive the recognition by the organization of language teachers.

The honor is tied to the council’s inaugural Global Engagement Initiative. It acknowledges programs that actively engage students in using language beyond the classroom.

ISU students preparing to be teachers in Spanish, French and German work closely with a local Unity Community Center, which serves a multicultural population. Students teach language lessons and serve as translators during parent-teacher conferences.

The outreach is overseen by Susan Hildebrant, who created the interactive course. She coordinates teacher education for the Department of Languages, Literatures and Cultures.

Science undergrad is first to serve on U.S. committee

Nora Fredstrom has been selected to serve on the American Chemical Society’s (ACS) national committee on chemical safety. She is the first undergraduate ever to be appointed to the committee.

A senior Honors student majoring in chemistry and occupational safety, Fredstrom plans to continue her education through to completion of a doctorate.

She is a member of the ISU Chemistry Club, which is associated with the Illinois Heartland Local Section of the ACS. Her nomination came through the local chapter and was approved by the society’s national leadership.

Campus maintains rank as military friendly school

Illinois State has once again been recognized for supporting veterans as they pursue educational opportunities. ISU has been named a top school in the Military Advanced Education and Transition 2016 Guide to Top Colleges and Universities.
The guide measures best practices in military and veteran education. Results of a questionnaire on military-supportive policies at hundreds of educational institutions are reported.

Selection is based on an institution’s military culture, financial aid, flexibility, on-campus support and online support services for veterans. Illinois State offers student veterans a variety of academic, advisement and financial support services.

The Veterans and Military Services office on campus helps with benefits, the transition to campus and referrals to other veteran services in the community. For more information visit Registrar.IllinoisState.edu/Veterans.

Levester Johnson began serving as vice president for the Division of Student Affairs on July 1. He replaces Brent Paterson, who had served as interim since Larry Dietz left the position to become ISU’s president.

Johnson came from Butler University in Indiana, where he served as associate dean of student affairs and assistant dean of students before rising to vice president of the division.

While there he provided leadership for construction of a $40 million residence hall, as well as a $48 million apartment village. He also served in a leadership role in development of Butler’s Efroymson Diversity Center and the Celebration of Diversity Distinguished Lecture Series.

“I am excited to become a member of a student-centered institution like Illinois State University, where I can leverage my experience toward further engaging the campus community,” said Johnson, who completed a doctorate in higher education administration from Indiana University.

He also holds a master’s in college student personnel from Southern Illinois University-Carbondale, where he worked as a coordinator in residence life and as hall director.

The National Weather Service has named ISU a StormReady University. The designation recognizes Illinois State’s preparations for severe weather conditions and emergencies. Qualification requires extensive planning for such emergencies, with resources in place to monitor conditions and communicate severe weather information.

University Police are on alert 24 hours, and a campus emergency operations center is ready for immediate use. Storm shelters are designated in campus buildings. Conditions are monitored with an on-site weather station and warnings sent through weather radios in residence halls, athletic venues, the Bone Student Center, the Student Fitness Center and Milner Library.

Severe weather information is relayed through the ISU Emergency Alert text system, the campus telephone system, classroom computer displays, digital display boards and flagship social media accounts.

“Illinois State University promotes a culture of preparedness,” said Emergency Manager Eric Hodges. “This designation illustrates that commitment.”

To the Editor,

I read with interest your story about the 50th anniversary of WGLT (May 2016). Of course, for some of us, WGLT is 54 years old!

As the article reports, the closed circuit version of WGLT began in 1962, operating from the dark recesses of upper Cook Hall. You could only hear the station in the residence halls, since WGLT was piped in via the heating system.

I remember the efforts of Ben Paxton and Ralph Smith to expand “broadcasting” at ISNU very well. It may have been a low-power student station, but as a reporter for WGLT, I wrote and read the news and got to interview singers like Judy Collins; Peter, Paul and Mary; and others. It was an extra-curricular activity that turned into a career.

Now, after retiring from nearly a half-century of broadcast news on radio and television, I can still proudly say my first broadcast “job” was at WGLT.

Tom McIntyre ‘66

To the Editor,

I sang in the ISU Christmas Madrigal Dinner for five years, from 1977-1981, in what must have been the golden age. It is just so highly ironic and sad to me that at the same time I am reading about ISU traditions, or the lack of them, or how some have been around since 2002, that I also learn this most beloved tradition has been discontinued after 60 years (November 2015)! John Ferrell and Bruce Kaiser must be turning over in their graves.

Online comment

Peter Tiggelaar ‘81, M.S. ’83

To the Editor,

I was a freshman at ISNU in 1959 and recall the time capsule being sealed and placed that fall. It’s amusing to find that the capsule has been “discovered” like King Tut’s tomb. Some of us from back then are still around, along with artifacts from the ancient 1950s.

Online comment

Recovery of South Campus time capsule

George Vrhel ’63, M.S. ’69
Illinois State men’s basketball great Doug Collins ‘73 will be inducted into the National Collegiate Basketball Hall of Fame in November. He is the first from the University to obtain the honor.

In his three-year varsity career at Illinois State, Collins averaged 29.1 points per game and totaled 2,240 career points. He was named both an All-American and Academic All-American after each season.

His success came at a crucial time of change for ISU men’s basketball. Will Robinson had been hired as the nation’s first black Division I head coach in 1970, and the University officially became Division I a year later.

Prior to his senior year, Collins represented the U.S. in the 1972 Olympics before being selected by the Philadelphia 76ers as the No. 1 pick in the 1973 NBA draft.

He went on to become a four-time NBA All-Star with the 76ers. After retiring, Collins began a multi-decade NBA coaching career. He has led the Chicago Bulls, Detroit Pistons, Washington Wizards and the 76ers. He also has been an award-winning TV analyst on ESPN.

An Illinois State Athletics Percy Family Hall of Fame member, Collins had his No. 20 jersey retired after his final home game in 1973. He is the only Redbird men’s basketball player to be so recognized. In 2007, he was honored again with the naming of Doug Collins Court at Redbird Arena.

Collins will be inducted in Kansas City with DePaul’s Mark Aguirre, Kansas State’s Bob Boozer, La Salle’s Lionel Simmons, UCLA’s Jamaal Wilkes and Georgia’s Dominique Wilkins. Joining them for the 11th enshrinement ceremony will be multi-school coaching legends Hugh Durham and Mike Montgomery.

The National Collegiate Basketball Hall of Fame began with the first class in 2006. The inaugural group included the game’s inventor, James Naismith, and legendary coach John Wooden. Since that time, eight more classes have been inducted. Those honored include Kareem Abdul-Jabbar, Danny Manning, Larry Bird, Magic Johnson and Shaquille O’Neal.
Redbird golfer takes MVC championship

Trent Wallace had a memorable freshman year on the ISU men’s golf team. He captured the 2016 Missouri Valley Conference championship title in the spring with a 1-over-par 211 at the Prairie Dunes Country Club in Hutchinson, Kansas.

Wallace fired two rounds at 69, which tied his season low and made him the fifth ISU student-athlete in program history to win the conference championship. He finished with five birdies on the tournament’s last day.

The victory established All-Missouri Valley Conference honors for Wallace, who was named MVC Newcomer of the Year. It also qualified him for the NCAA Golf Championship that was held in May. He ended that competition eight over par, just missing the opportunity to advance to the national championship.

As a team, the Redbirds finished third in the MVC championship. The men finished 2 strokes behind Wichita State and 12 back from Southern Illinois University, which won the team title.

Volleyball stand-out in Olympic training

Junior Jaelyn Keene has been selected to train as part of the U.S. Collegiate National Team. She earned a spot on the squad this spring after competing against 231 collegiate players at the USA Volleyball Women’s National Team Tryouts.

She was one of 36 players chosen for the squad, which is part of USA Volleyball’s High Performance pipeline and considered a second tryout for the U.S. Women’s National Team.

“I am so grateful to be chosen. This is a once-in-a-lifetime opportunity, and I am really excited,” said Keene, who is an accounting major.

This year’s Academic Progress Rate (APR) report by the NCAA shows that 11 of Illinois State’s 19 sports equaled or exceeded the national average for public universities in their sport.

“We are proud of the academic success of our student-athletes,” said Cindy Harris, senior associate director of Athletics for compliance and student services. “Academic achievements are a testament first and foremost to the student-athletes, who work so hard in the classroom.”

The APR measures eligibility, graduation and retention each semester or quarter to provide a clear picture of the academic performance for each team in each sport. This year’s ratings are based on scores from fall 2011 through spring 2015.

Among Illinois State’s 19 squads, five teams earned perfect, single-year APR scores of 1,000 for 2014-2015. These include men’s golf and tennis, gymnastics and volleyball.

The football team earned an APR of 970, which is 17 points higher than the Division I average for FCS Football and the highest in the Missouri Valley Football Conference.

ISU’s women’s basketball team score of 995 is also 17 points higher than the Division I average for women’s basketball.

Senior athletes celebrated

Senior student-athletes were recognized in the spring. The 73 helped secure more than 580 victories, seven regular-season conference championships, six conference tournament championships and 12 postseason appearances during their time at ISU.

They also tallied three conference player-of-the-year awards, 18 individual conference championships and 64 first-team all-conference selections. Four were named All-Americans. Their class posted a cumulative GPA greater than 3.0 and helped complete more than 2,000 community service hours in each of the last four academic school years.

Volleyball star Ashley Rosch was presented the Laurie Mabry Award, with each senior receiving a plaque noting all of their accomplishments as Redbird student-athletes.

To buy single-game football tickets now, visit GoRedbirds.com/Tickets or call (309) 438-8000.
Hammond heard Ted Cruz jokingly tell supporters he wanted them to “vote for me 10 times” on dozens of occasions. (Cruz meant bring 10 friends to your polling place. “We’re not Democrats,” he said to laughter.)

So Hammond finds his own story. When rows of TV cameras are pointed toward a candidate at a podium, Hammond turns his lens another direction. He spent a February evening inside a Bernie Sanders phone bank in South Carolina, filming activist and rapper Killer Mike tell a voter about how the senator’s economic policy will help black men like him.

At a Sanders April rally in Wisconsin, Hammond spotted an unusual lone protester. The result? A 2-minute video called “Here’s What Happens When an Ayn Rand Fan Attends a Bernie Sanders Rally.”

As cable news networks brag about faux-exclusives, Hammond’s work actually is unique with small moments that no one else is seeing or sharing. “It’s always silly to me that we send so many cameras to do the same thing,” he said. “I’m glad I have the freedom to turn my camera away and give the viewer a real sense of what it was like to be there.”

Hammond shoots and edits for Bloomberg Politics’ daily TV show With All Due Respect, hosted by Mark Halperin and John Heilemann, authors of Game Change and Double Down. Hammond’s work also feeds Bloomberg’s website and social media.

Technically, Hammond is a journalist. But not really. He is a highly regarded online video pioneer who’s produced hundreds of do-it-yourself tutorials for low-budget filmmakers.

He is blazing his own path as a documentary filmmaker, just like he’s done in every job he’s had since coming to Illinois State to study television and media.

Hammond began college at New York University’s acclaimed film program, but transferred to ISU’s School of Communication. He shot tons of news stories for TV-10 and edited a short film.
about the proposed closure of a Central Illinois prison with the Documentary Project under Associate Professor John McHale.

“It took ISU to show to me that documentary filmmaking was what I really loved,” Hammond said. “Without those things, I wouldn't have realized this was a possible career path for me.”

Hammond credits his relationship with faculty like McHale for jump-starting his professional life, which began with an internship and then full-time job at Bloomington-based State Farm. While working for the insurer he produced a fun cautionary tale about the dangers of turkey fryers, which made William Shatner a viral-video celebrity.

Initially working in social media at State Farm, Hammond took over as executive producer and host of Indy Mogul in 2011. The Google/YouTube “lab channel” taught low-budget, DIY filmmaking techniques to thousands of subscribers.

By 2013 Hammond had produced thousands of videos and wanted to make a film. He returned from the South by Southwest film festival inspired to create a film on Sriracha—the chili pepper-based sauce that’s become wildly popular in recent years and broke through as a culinary headline-making darling. His 33-minute movie, called *Sriracha*, about the culture and history surrounding the sauce won Best Short Film at three festivals and earned great reviews.

The film’s creation and distribution is as fascinating as the final product. Hammond successfully tapped into Sriracha’s fan base to crowdfund $20,780 in digital presales to pay for production, including overseas travel. In addition to the festival circuit, he also navigated online video platforms such as Vimeo, Amazon, and Hulu so his film could reach more people. In its first 18 months, he captured 300,000 views.

If his resume sounds all over the map—especially for a 32-year-old—that’s because Hammond doesn’t have some master plan. He hasn’t plotted all the steps it’ll take to get him to an Oscar.

“I found this alternate path, where I just try to appreciate when people think of me for a job, and where I’m willing to jump at an opportunity and try something new,” Hammond said.

These days that means covering the 2016 presidential election. He was given the opportunity because someone at Bloomberg saw *Sriracha*. He was asked in summer 2014 if he wanted to join their new political media venture.

“It was a weird, out-of-the-blue thing,” he said.

Hammond is based in New York, where he lives with his wife. More recently, he’s lived in hotels and airports. He's spent weeks in Iowa, New Hampshire, South Carolina, and Wisconsin, to name a few destinations. He logged 100,000 frequent flier miles in 2015 alone—before the first caucus was even held.

What’s it like on the trail?

On the night of the Iowa caucuses in February, Hammond was running on three hours of sleep in two days because he “made the mistake” of pulling an all-nighter to finish editing a video.

That night, he hopped on Sanders’ charter plane for an overnight flight to

Griffin Hammond’s travels have brought him on stage with Bernie Sanders, above left, to Des Moines, Iowa, above right, and to political rallies all over the country, including one in Milwaukee, left.
New Hampshire, where the primary was held eight days later. They landed in Manchester at 4:11 a.m., preceded by Hillary Clinton’s plane and followed by Cruz’s. Standing with Hammond on the tarmac was a who’s who of American media heavy-hitters—all freezing as they silently unloaded their bags.

“It was just so strange,” he said of the airport scene. “But this is the job.” Hammond arrived at his La Quinta hotel at 6 a.m. that morning. He slept for 90 minutes. Then it was back to work. Not surprisingly, he gets sick a lot.

He produces dozens of videos each month for Bloomberg’s website and the TV show. His most popular, as of May, featured actor Jeff Daniels in a shot-for-shot riff on the opening scene from his HBO series The Newsroom. It clocked a million views in its first week and became the No. 1 trending story on Facebook.

He’s especially proud of his videos about the “ground game” that Clinton and Sanders ran in Iowa and South Carolina, focusing on the volunteers and precinct captains who knocked on doors and used their cell phones to reach voters. In Hammond’s 4½-minute “ground game” video about Sanders, the Vermont senator is himself only on screen for a few seconds.

Political polarization has been a dominant storyline throughout the 2016 campaign. Yet Hammond’s work featuring evocative music and humor humanizes voters on all sides. In other words: Nobody looks that crazy.

“Regardless of their beliefs, they seem more similar than different to me,” Hammond said.

While friendly with the candidates and their staffs, Hammond does see the repetition of the campaign beginning to change him. They’re performers. Deliberately divisive at times.

“I feel myself getting more cynical,” he said.

The same ingenuity and resourcefulness that’s earned him celebrity status in the online-video community now comes in handy on the campaign trail. He’s often a one-man crew, carrying a messenger bag, backpack and tripod. When he needs a second tripod for a two-camera interview, he’ll make one out of a chair and a small clamp.

His ability to stay nimble buys him access. It’s easier for a campaign to agree to an interview if the candidate doesn’t have to wait around for the lighting guy to set up.

“I’m willing to jump at an opportunity and try something new.”

“I go to these events with a lot more versatility,” said Hammond, who expects to be on the trail through the November 8 election.

“It’s going to be a crazy year.”

His film, Sriracha, can be downloaded for $2.99 on SrirachaMovie.com.
August is the month when colleges and universities across the country welcome incoming freshmen to campus. There is a palpable sense of relief as the next class arrives, ending the work of securing students for another academic year.

The mindset differs greatly at Illinois State. In Redbird country, move-in day definitely marks an opportunity for the campus community to greet first-time students. They are, however, embraced as future alumni. It’s a status each holds from the moment of enrollment.

“We don’t recruit freshmen. We recruit graduates.”

So say the leaders who oversee ISU’s undergraduate education, enrollment, admissions, advisement and financial aid. All concur that Illinois State does not admit merely with the goal of building a class in a given year. The mandate instead—from the president’s office on down—is to find and accept students who will stay and succeed beyond their first year to cross the commencement stage.

The difference is more than semantics. It’s a mode of operation, an attitude and approach that exemplifies the campus commitment to individualized attention. It also helps explain how Illinois State has achieved and maintains one of the best graduation rates in the country.

“We have a special culture of completion at ISU that has been built over years as part of who we are and what we do. It leads to self-fulfilling behaviors and our students’ inherent commitment to complete the degree,” said Troy Johnson, associate vice president for Enrollment Management. “Our focus on students—including our student emphasis in the University’s strategic plan

PASSiNG GRADE

by Susan Marquardt Blystone
as well as our faculty hiring process—is key to our outstanding student success rates."

With a 73.4 percent six-year graduation rate, ISU is in the top 10 percent of public and private universities nationwide. That compares to 56 percent as a national average, according to the U.S. Department of Education, which compiles statistics using a six-year model that does not include transfer students. Among the schools ISU has surpassed are University of Missouri and Iowa State.

"Some of the most well-known universities in the nation hover at rates of 69 to 70 percent," Johnson said. "Illinois State's rate eclipses those elite institutions and is only a few percentage points less than several other world-class American universities."

As the one responsible for leading efforts to meet strategic enrollment goals while maintaining academic standards, Johnson often gets asked why the rate matters. The answer is that the percentage stands as evidence Illinois State fulfills its promise to see that students are successful, which also means they graduate on time with less debt.

"We are able to demonstrate that Illinois State is a good investment," Johnson said. "From the student and parent perspective, there is a tremendous investment of money and time in higher education. It is important that they see we are committed to them."

How the University excels in consistently shepherding thousands of students from the admission process and freshman orientation through to commencement ceremonies is the second obvious question.

The explanation has multiple layers and cuts across the entire campus.

All agree the fundamental element in the formula that is continually refined comes down to a unified approach that keeps the focus on individual students.

"We have a passion for student success. We know our students, we make connections with them, and we stay in touch," said Provost Janet Krejci. "We exist for their success. Students who are admitted here should be able to succeed. If we identify students at risk of leaving the University, we think very deliberately about how we can best support them."

Internal reflection is where the improvement process began 13 years ago with development of the University's comprehensive strategic plan, Educating Illinois. Jonathan Rosenthal, associate provost for Undergraduate Education, recalls extensive discussion about the graduation rate, which was much lower at that time.

“Our goal was to get it in the range of 60 percent. We made it a deliberate decision," Rosenthal said. As a result, leadership focused on charting a course for Illinois State that would make it stand out from other public universities.

There were changes to admissions procedures, such as adding an essay and fee to the application process. Other substantial shifts included redesigning the general education program. Such actions were intended to draw stellar students, which remains the goal today.

Doing so is a greater challenge than ever before, however, as Illinois is now the number two exporter of high school students behind New Jersey. The high school demographic is shrinking, which means fierce competition to enroll the numbers needed to maintain a significant revenue stream.

Every university relies on each freshman class as the underpinning for years of financial stability. This budget reality explains why some schools are tempted to do whatever it takes to secure admissions.

One of the easiest solutions is to drop entrance requirements. This is not acceptable at ISU, where the average freshman has a high school GPA of 3.4 on a 4.0 scale and an ACT score near 24. The refusal to lower the bar is a powerful and foundational reason the graduation rate has climbed. A good percentage of those enrolled at ISU come ready for the collegiate experience.

"We have to start with students who are focused and want to graduate," Johnson said. "These are the qualities our students bring." With such fundamentals in place, campus efforts that reinforce graduation as the end goal are increasingly effective.
Some of what is done is subtle. For example, students are given multi-year scholarship and aid packages from the start. Incoming students are promised that their tuition and fees will not rise for four years of consecutive enrollment. Freshmen work with advisers to create a four-year plan of study. Each piece establishes a path and reinforces to students that the campus community expects they will complete their degree on schedule.

“These are powerful tools on the recruitment and the retention side,” said Johnson, who believes ISU’s policy of requiring freshmen to live on campus the first two years also bolsters the graduation rate.

While no longer the norm at many schools, Illinois State keeps the rule in place to help students build friendships quickly, feel comfortable on the campus and focus on academics versus housing issues as they get established.

What happens in the classroom is crucial, as teaching remains paramount at ISU. The University consequently seeks faculty willing and able to balance teaching with research.

“Everybody talks about that, but we actually do it,” Rosenthal said, noting the norm for undergraduate students is to learn under full-time faculty. They include students in research projects so often that it is not unusual for graduates to have partnered and even published with a professor.

“Tentacles is another tactic,” Johnson said, meaning there is purposeful and constant contact across the University about what needs to be done to keep students engaged and on track. The result is a flow of information that nurtures collaboration.

The campus is so in sync that faculty call academic advisers when a student is struggling. Advisers call Financial Aid before approving a class change that could impact funding received in a given semester. An entire unit, University College, exists to offer interventions (see sidebar).

The circle of interaction is large and never ends, creating a positive synergy and student outcomes that have ISU in the national spotlight. Other institutions are noticing that Illinois State’s formula for finding, keeping and graduating stellar students is uniquely effective.

And while administrators admit it will be difficult to push the graduation rate percentage higher, they are confident the pattern of exemplary excellence in seeing students go from freshman to alumnus will be maintained.

“We have built this to be a value of our campus,” Johnson said. “This campus culture says we will have a high graduation rate. We keep our promise to not just enroll but graduate.”
There is no place for students to hide on the Illinois State campus. Not from faculty, not from academic advisers, and certainly never from Amelia Noël-Elkins. It is her mission to find those who might be struggling for whatever reason and intervene. She excels at the job, which is done through her role as director of University College.

Formed 20 years ago, University College (UC) experienced significant growing pains before reaching its current status as the place that helps students transition to campus, achieve their goals and make it to graduation.

UC touches every undergraduate student. From Preview sessions to Transfer Days, academic advising and tutoring, the 55 employees in the unit exemplify ISU’s call for individualized student attention.

“Campuses with a one-size-fits-all retention plan are missing the boat,” Noël-Elkins said. She knows it takes the entire ISU community working as a team at the individual level to help students succeed.

It also takes a specific plan of intervention. UC has many in place to catch problems early. All freshmen must work with academic advisers, who do far more than create a plan of study. They also ask about involvement and push students to engage quickly, especially with faculty.

“Students are much more likely to be retained if they are happy here,” Noël-Elkins said, noting that failing to connect is as much a concern as making solid grades. “The best prediction of college success is behavior once the student gets here.”

UC staff, who see thousands of undergraduates during a semester, regularly reach out to other units when a student needs help resolving a problem or connecting. Student Affairs is one resource, as the division has myriad student organizations and activities.

That team also realizes the importance of keeping tabs on students, which it does through partnerships with various units across campus, including University Housing. One example is the house calls program each fall. Faculty and staff volunteers knock on residence hall doors at the start of the semester and help address any issues.

That is just one of many ways anyone on the campus can reach out. Each employee has a different way to make a difference,” Noël-Elkins said. Making students realize the campus community as a whole is ready and eager to help is another University College priority.

The message comes through in creative ways, such as with the GPA 911 program tied to mid-term grades. Advisers check when faculty have them posted. A potentially startling message is sent to students close to failing classes: “We know your GPA. Do you?” The email includes information about help available to get on track.

UC offers academic services through the Julia N. Visor Academic Center, which provides general workshops on study habits, taking class notes, time management and testing skills. It goes well beyond general tutoring at no cost, offering help tied directly to classes that have a high rate of failure or withdrawals. A tutor goes to the class, takes notes and is then ready to teach the concepts again when students need additional coaching.

Other support services exist for students in various populations, including those who are first-generation, within a traditionally under-represented group, or from a low socio-economic status. A multi-year federal TRIO grant bolsters the University’s ability to provide services to individuals in at-risk groups as they progress toward graduation. Students who want additional academic challenges are also guided through UC, which handles interdisciplinary studies.

Regardless of what a student needs to go forward at Illinois State, UC staff start by listening. They realize not all students enroll knowing how to succeed at a university, which is why self-advocacy is an early and important lesson.

“Each individual conversation starts by asking if the student has met with the professor. They have to be assertive in their own academic situation,” Noël-Elkins said. “This is not a hand-holding operation or meant to enable students in a bad way. We instead give and teach the skills for students to be successful.”

And they are—as proven by the University’s graduation rate.

Impact of a caring campus

Sophomore Jessica Ackley, an actuarial science major, will graduate in less than four years. Josh Feinstein completed a degree he created through UC in circus studies. Read their stories at IllinoisState.edu/Magazine.
15 YEARS LATER

FBI AGENT RECALLS NATION’S GREATEST TEST

BY JOHN MOODY
Most of us can appreciate that there was an America we knew before September 11, 2001, versus the country we know now. Two different places separated by a few short, horrific hours that changed everything.

Louis Bladel, a 1989 criminal justice sciences graduate and 2015 College of Applied Sciences and Technology Hall of Fame inductee, knows well the new reality that Americans face.

As an FBI special agent and a career federal law enforcement officer, he also knows how the bureau has been forced to rethink the way it does business in the 15 years that have followed the terrorist attacks that destroyed the World Trade Center.

“But now we reach out to our partners when we don’t know something about a particular group,” Bladel said. “That really didn’t happen enough prior to 9/11. There were walls set up by design between agencies.”
The bureau’s priorities have shifted from a focus on organized crime and drug trafficking toward counterterrorism, counterintelligence, and cybercrime. The interagency spirit of collaboration is the most significant turn he has witnessed.

“It used to be your agency stayed in their lane, but now there’s a lot of cooperation,” Bladel said. “The cross-lane cooperation has been greatly enhanced. That cooperation is something to be proud of. We’ve done a very good job with that.”

It’s a philosophy that extends beyond domestic borders and U.S. agencies—the FBI, CIA, and the National Security Agency—to friendly foreign partners, Bladel said. That list includes “the Brits, the Canadians, the Aussies, and the New Zealanders.”

The change is welcomed by Bladel, who began his law enforcement career in 1989 as a special deputy with the U.S. Marshals Service in the Eastern District of Virginia. From there he moved to a special agent position with the Naval Criminal Investigative Service, widely known as NCIS.

He’s been with the FBI since 1996, serving in New York City and primarily in Washington, D.C. He’s also had temporary assignments in Guam and Kenya. His current position is special agent in charge of the counterintelligence division of the New York field office.

Bladel was living in Manhattan on the morning of September 11, 2001, but he had no intention of going to the office that day. “My youngest son was born on September 6, and we brought him home on September 10,” he recalled. “My plan was to spend time with my 1-year-old son and my new baby, take a couple of weeks off.”

With the baby’s days and nights mixed up, his exhausted parents didn’t fall asleep until 7 a.m. It was a phone call from Bladel’s hometown in Illinois that made him aware of the crisis.

“My mom called from Rock Island and asked if we’d seen the news, and we hadn’t,” Bladel said. Once he’d heard what was going on, he felt it was his duty to get to the FBI’s field office in Lower Manhattan.

“The debris and smoke were unreal,” he said of the scene as he made his way deeper into the city. “By the time I got to Canal Street, the second building came down. No one thought those buildings would come down.”

The World Trade Center towers were just blocks from his FBI office, where his official car was parked in a nearby garage. He made his way into the city with the help of his local barber, who operated the shop below his apartment.

“I hitchhiked down to Lower Manhattan,” Bladel said. Two rides later from two different truck drivers put him close enough to walk the rest of the way. A trip that would take 20 minutes on a normal day had taken an hour.

As he neared his office, six blocks from ground zero at Broadway and Worth Street, the chaos built.

“There were probably 1,000 sirens going off—probably more, if you think about it—down in Lower Manhattan,” Bladel said. “I remember seeing parents freaking out looking for their kids at daycares, rightfully so.”

His own plans to stay home with his new son had faded.

“I worked from noon to midnight until January—and that was the whole office, not just me,” Bladel said. “But that’s no big deal. If you can’t get motivated by this, then you shouldn’t be in the FBI.”

About 50 agents managed to get to the office to run down leads, but there wasn’t a lot they could initially do, Bladel admitted. With about five years on the job at the time, he laughs at the thought that he was one of the more senior agents.

Once both towers fell, Lower Manhattan shut down. That included the FBI offices, which had lost phone service. Finding alternate office space was paramount. The Intrepid Sea, Air & Space Museum, which is a massive complex aboard the Intrepid aircraft carrier, became home for the FBI for several weeks.
“We focus on counterespionage, counterproliferation, and counterintelligence,”

“We set up shop on board the Intrepid because it was defendable. We didn’t know if the attacks were done,” Bladel said. “We had boats out back in the harbor to protect us, barricades out front. It was seat-of-the-pants as you can imagine, but we could defend it if we needed to.”

There was also a McDonald’s nearby that could help feed what is the FBI’s largest office, with 1,300 agents and 1,200 support staff. After about a month, the FBI moved again, this time to its garage on the West Side Highway and worked there until November.

Following the 9/11 attacks, Bladel was assigned to an investigative response squad that focused on pending international terrorist threats to the New York City area.

By 2002 he was promoted to a supervisory special agent position in the Eurasian Section at FBI headquarters in Washington, D.C., where he worked on counterintelligence and espionage investigations.

He’s spent the bulk of his career since working out of Washington, but as of October 2015, he’s back in the New York office, where his duties are wide ranging.

“We focus on counterespionage, counterproliferation, and counterintelligence,” he said.

Counterespionage, according to Bladel, is defined as catching spies. Counterproliferation means “keeping weapons and weapon technologies from Iran, China, Russia, and North Korea,” he said. Counterintelligence is all about “neutralizing foreign intelligence officers who target U.S. technology and people in positions of trust.”

Like all Americans, he has not forgotten that September day when the world changed. He said people don’t realize how many threats there are that don’t usually amount to much.

And he’s still bolstered by something that happened in those long workdays that came right after the attack, something that reminded him why people still come to the United States to seek a better life.

The FBI was inundated with phone calls about “suspicious-looking individuals” who were often termed suspect only because of the color of their skin or because they appeared to be from a foreign country.

“But we checked them all out,” Bladel said. Those 12-hour days spent interviewing people from across cultures renewed his faith in America because he saw individuals who had sacrificed to be in America.

Now, more than a decade after the attack, Bladel sees a shift in attitude across the country. World terrorist attacks are raising suspicions of some ethnic groups again within the U.S. At the same time, he sees less urgency from citizens who now resist steps for official monitoring.

“Regarding American life, I think soon after 9/11 there was a significant change in how the average American viewed their privacy as it pertained to electronic/mobile communications,” Bladel said.

“Most people were willing to sacrifice privacy to ensure they were safe. After 15 years, it seems people are less willing to sacrifice privacy.” He cited as one example the legal battle between the FBI and Apple, which he called a healthy debate.

Despite all that he’s witnessed in more than 25 years of federal law enforcement, Bladel remains optimistic about the strength of America going forward.

“The good news is we live in a country where the legislative branch—meaning the people—will ultimately decide, like they did right after 9/11 when the enhanced surveillance laws were enacted,” he said. “The FBI is not a political organization, thankfully. We just need to know what the rules are so we can use all lawful tools available to pursue our investigations.”
A tiny booklet given out at a school dance. A well-used campus dining punch card. A plush cat with a Redbird in its mouth used for an event giveaway.

These are just a few of the items found inside two time capsules unearthed by demolition crews tearing down Hamilton-Whitten and Atkin-Colby residence halls earlier this year. The items plus dozens of others—some as pristine as the day they were boxed up—tell the story of student life around 1959–1961, when the South Campus halls were built.

“A lot of this stuff I’d never seen before,” said University Archivist April Anderson from Illinois State’s Dr. Jo Ann Rayfield Archives at Milner Library.

The first time capsule found was from 1959 and had been placed in the cornerstone of Hamilton-Whitten. Although waterlogged, Anderson expects to salvage around 75 percent of its contents. The second capsule was found one week later in an Atkin-Colby cornerstone, thanks in part to watchful demolition foreman Ron Wert.

That metal box was sealed in October 1961 and remained in pristine condition. As Anderson and her Archives colleague Ross Griffiths, M.S. ’13, examined the materials, they were amazed by how everything was well preserved. Ink on the front of a Chicago American newspaper from 1961 was still bright red.

Other items included original versions of the Whittilton newsletter for Whitten Hall residents, a weekly arts and entertainment events calendar advertising the Harry Simeone Chorals and Chad Mitchell Trio, a yearbook from 1961 with its edge sliced off to fit inside the container, and an ISNU newsletter.

“So many of these materials haven’t seen the light of day since Kennedy was president,” said Griffiths, director of preservation and university archives at Milner Library.

Alumni made aware of the time capsules by local media at the time of their unveiling appreciated the memories and were eager to share their stories about the time capsules’ contents.

Annis (Moss) Guenther ’60 and her husband, Ron ’60, were surprised to see his 1955 Oldsmobile on the front of The Pantagraph newspaper in Bloomington-Normal. A photo of Ron’s car, above, was found inside the first time capsule. The newspaper featured it in a story about the capsule’s discovery.
Ron was president of Dunn Hall as a student. He let his friends borrow that car one night for a drive-in movie, and a photo of students piling into it was tossed into the capsule in 1959.

“That was the car he courted me in,” said Annis, who lives in Normal with her husband. Both are retired educators. “To suddenly see it in the paper after all these years, it was a riot.”

Anderson and Milner staff were equally excited, as the discovery of any time capsule is a moment worthy of celebration.

“These students back then are putting things in here that are important to them, to tell us what’s exciting and what they were dealing with at the time. They don’t know when it’ll be uncovered,” Anderson said. “It’s almost like we’re reaching back and talking to these students from that time period.”

Prior to South Campus, the last ISU time capsule discovered was at University High School. That one was from 1964 and was also in pristine condition. A small button that read “I Love The Beatles!” was one of the many treasures inside, in addition to the usual mix of paperwork and yearbooks.

Demolition and site-clearing of Hamilton-Whitten and Atkin-Colby was completed during the summer. The University’s master plan calls for a new Mennonite College of Nursing building at that site, although no timeline is set for construction.
ONE CHILD,
One Home
Alumna works to reform foster care
By Kate Arthur

During her job interview, Amelia Franck Meyer made it clear to board members that if they were looking for someone to put more kids in strangers’ homes, they shouldn’t hire her.

Not a terribly popular thing to say around a table of foster parents.

Meyer’s next sentence was even more powerful: If they were looking for someone to transform the U.S. child welfare system—starting with their Midwestern nonprofit—she could do it.

Fifteen years later, Meyer has stayed true to her word as CEO of Anu Family Services in Minnesota and Wisconsin. She is an emerging national leader in the field, achieving unheard-of numbers in finding permanent homes for foster children.

Instead of moving 30 or 40 times before turning 18, even hard-to-place kids are finding permanent homes as much as 70 percent of the time through Anu. That’s an increase of more than 30 percent from a decade ago for the agency established in 1992.

“It was my job to put an end to that assembly line,” Meyer said. “It was just so heartbreaking. We were removing kids from families with the idea they’d go to another family and live happily ever after, and that wasn’t happening.”
That reality was not acceptable for Meyer, who graduated from Illinois State in 1989 with a degree in psychology. She also completed a master’s in sociology in 1995 at ISU. The campus was far from the two-bedroom apartment she shared with five siblings in an Aurora neighborhood so violent that she witnessed a shooting at a classmate’s eighth-grade party.

The only one of her childhood girl-friends on her block to go to college, Meyer was influenced by her mother, whom she described as “a closet social worker.” She taught her children there were always others worse off, and that it was their responsibility to care for those struggling.

“She was a huge influence, mostly because she believed I could do anything. When I was little, I wanted to adopt one child from every country.”

Meyer also felt empathy for those affected by childhood trauma because of the abuse her father suffered. “I just grew up with the sense children should be protected because no one protected my dad.”

From that background grew a determination to guide a turnaround of the U.S. foster care system, which Meyer believes can be done by first healing the grief of losing parents and multiple caregivers.

“We come into this world being the most vulnerable mammals that exist,”

Amelia Franck Meyer

“WE COME INTO THIS WORLD BEING THE MOST VULNERABLE MAMMALS THAT EXIST.”

believe that could be done.”

Normal healthy brains diminish their capacity to connect after multiple unresolved losses, Meyer explained, especially with caregivers. Experts in the field were convinced that once an attachment disorder occurred, the consequences were forever. “Now we believe there are ways to heal that wound,” she said, “that you can form permanent, stable connections later in life.”

This perspective explains the confidence Meyer has in Anu’s mission, which is to create permanent connections to loving and stable families. Meyer knows that this approach makes it more likely a child will stay as part of a permanent family, but the funding to implement such a plan doesn’t exist.

There is also the question of how other agencies work within the foster care system.

“It becomes clear we can do this one child at a time for whoever is lucky enough to come to Anu. But every kid, no matter where they are, should have this same level of care. How do we reform systems so they’re healthy enough to understand what children need to heal?”

The question haunts Meyer, who has a passion to make universal change. With more than 375,000 children in foster care, there is a desperate need for families.

The number of children aging out of care without a permanent home rises each year. Estimates are barely half will graduate from high school and only 2 percent go on to get a bachelor’s degree or higher. One out of four will experi-
ence homelessness, and 51 percent will be unemployed. Nearly 70 percent of all adults report some childhood trauma.

“One kid, one family at a time is going to reach a few hundred kids in my career—and my middle name is impact,” she said. “I need all children, all children, to maximize their likelihood of achieving permanence in a loving, stable family. I feel incredibly strong about that.”

It is consequently no coincidence that Meyer has emerged as a national expert in understanding the effects of childhood trauma and creating a better way for children in the system.

She received the Youth Thrive Award for Exemplary Programs in 2014 from the national Center for the Study for Social Policy. Last year she was named a Bush Fellow by the Bush Foundation, founded by 3M executive Archibald Bush in the 1950s to build communities.

She was also named an Ashoka Fellow in 2015, making her part of the largest network of social entrepreneurs worldwide, with fellows in 70 countries putting their ideas into practice globally.

Meyer was chosen in recognition of her extraordinary achievement and potential based on her groundbreaking work on healing grief and trauma, as well as her transformational vision for systemic change. She actively shares her plan with leaders, staff, students, educators and legislators. She reached nearly half of the states last year in 110 days of travel.

She is also still a student. The Bush Fellowship makes it possible for Meyer to pursue a doctorate in organizational change and leadership at the University of Southern California. She wants to keep building on her education, which includes a second master’s in social work from the University of Minnesota and experiences at Illinois State that were empowering—including work as a Preview guide and Admissions counselor.

“I know people inside. I know people in groups and families. What I wasn’t bringing to the table was how to move systems,” Meyer said. “We know what to do, but we can’t get it integrated into the system. Why is that?”

Education is one solution, which is why she started Alia. It focuses on systemic change in child welfare and means “other and different.” The organization teaches child welfare agencies how to work toward permanent placement.

A laboratory for refining her model, Alia offers workshops, certificate and learning programs, along with intensive coaching in workforce well-being and other resources.

“We really need to look at a more systemic reform,” she said. “We’re hoping to build the capacity of systems to create change.”

To do so requires focusing on the wellbeing of the workforce. Children with one caseworker in a year have a 75 percent chance of going to a permanent family. That drops to 17.5 percent when there’s a turnover and as low as 5 percent if a youth has three social workers in a year.

Because the work is so incredibly demanding, Meyer limits her staff caseloads to no more than eight children. She makes self-care for staff a priority. “Until you take care of your staff, you can’t do anything new,” Meyer said.

She also believes more effort should be placed on helping parents avoid losing their children.

“You can’t treat a wound that is not having your mother. What kids need most is for their parents to be OK. If their parents are OK, they’re OK,” Meyer said. “We spend far too much time and money removing and treating children and not enough time and money helping parents.”

She understands the parent perspective, as she relishes her role as a mom to her two grade-school children and three older stepchildren. There is no separating her emotions as a mother from her professional mission.

“I tuck my kids in, and I know they feel loved. I know they feel safe, and I see what that does for them. I think about all the kids in the world who go to bed terrified,” Meyer said, as they don’t know if they will be victimized or moved yet again. The thought keeps her pushing for change, knowing “every kid should go to bed knowing they’re loved and they’re safe.”

“I need all children, all children, to maximize their likelihood of achieving permanence in a loving, stable family. I feel incredibly strong about that.”
Join us on October 8 for ISU’s biggest event of the year.

#RedbirdHomecoming

Homecoming.IllinoisState.edu
Alumni have returned to the Illinois State University campus annually in the fall for a Homecoming celebration since 1921. There were attempts to organize the event beginning in 1916, but nothing official was held on a regular basis until five years later. A look at what was added over the years gives a sense of how much Homecoming has grown, as well as a chance to test your knowledge about traditions tied to the celebration.

Wearing red on Fridays, encouraging campus visits and communicating what it means to be a Redbird are just a few ways alumni can impact the decision of prospective students.

“Redbirds from all over the country play an important role in attracting bright and talented students to our campus. Their influence is critical to the ongoing success of the University,” said Admissions Director Jeff Mavros. “Illinois State is incredibly fortunate to have such a supportive alumni population.”

Admissions sees the influence of alums through events and targeted outreach, including #RedbirdSetGo. This annual social media initiative each spring asks alumni and current students to share their experiences with the hashtag. The goal is to encourage admitted students to complete enrollment.

Many alumni may not realize the impact of including Illinois State in their social media exchanges and daily conversations. Every post shared or retweet is an opportunity to Spread the Red to prospective students. The University provides President Dietz’s Points of Pride as talking points for alumni to share. Go to IllinoisState.edu/PointsofPride to learn of excellence across campus.

Some alumni networks extend their efforts by organizing welcome events for new students within their region. The Black Colleagues Association, for example, holds annual Meet and Greets every February. Other regional networks are considering hosting programs for potential and incoming students outside of Illinois.

There are also subtle ways alumni can help promote the University. Teachers can display Illinois State prominently in their classroom with Redbird items available through University Marketing and Communications.

Join your fellow alums in sharing stories, memories and #RedbirdProud moments. Find out how you can get more involved through Alumni.IllinoisState.edu/Association.
Redbirds scattered far across the country

With an alumni base of more than 200,000, it’s not surprising that graduates have settled in just about every state of the nation. It’s also not hard to understand why Illinois has the largest number of Redbirds, with more than 125,000 still living within the state.

But did you know that Florida has 4,148 graduates compared to the 4,126 living in California? On the other end of the spectrum, there are only 56 in Rhode Island, 62 in West Virginia and Vermont, and 66 in North Dakota.

A map showing where Redbirds have settled is now available online at IllinoisState.edu/Magazine. Visit the site to learn how many fellow graduates are in your part of the country.

Get to know fellow Redbirds in your area by joining a regional network. Go to Alumni.IllinoisState.edu/Networks for information about local groups. Find out how you can start one by calling (800) 366-4478 or email Alumni@IllinoisState.edu.

Reunion plans for Politics/Government

The Department of Politics and Government has prepared leaders for 50 years. The success and growth will be celebrated the evening of Friday, September 30. Alumni and guests are invited to a reception, dinner and program. Cost is $20. For information and to register, call (800) 366-4478 or visit Alumni.IllinoisState.edu/PolGov.

Directors chosen for Alumni Association

There is new leadership within the Alumni Association following the annual meeting in June. Tim Pantaleone ’07 is president, Michele Guadalupe ’01 vice president/president-elect, Kathy Coyle Murdoch ’86 secretary, and Kaci Rollings ’94 serves as past president.

From the archives

Named after the University’s first librarian, Milner opened in Old Main in 1890. Five buildings have housed the library, which moved to its current location 40 years ago. Much has changed in look and approach the past four decades. Older alums remember the library as a place of quiet study, as shown above from 1976. Today computers have replaced the card catalog, comfortable seating and beverages are the norm, and therapy dogs are invited in during finals week.
Lecturing to about 700 students on subtropical deserts, when many of them have just rolled out of bed, is a tough teaching assignment.

Bill Shields ’99, M.S. ’01, has done it 33 semesters in a row, waking mostly freshmen with his stories of growing up in the 1800s and hammering shoes on mules. Some of his stories are even true.

He has made Principles of Geology one of those classes you just have to take before you graduate—not because it’s a requirement, but because of who teaches it. The former personal chef and lineman has been called an icon and wizard on social media by his students.

Shields started college at 36, when married with two young children. That was 20 years ago. He earned his ISU degree in geology, followed by his master’s. Then Department of Geography and Geology Chair Dave Malone recruited him for a coordinator role. Two weeks later, he was in the classroom.

“The students love him,” Malone said. “He is wildly popular. We go for a walk about every day. I get zero hellos and he gets five or six.”

That’s because Shields has taught more than 30,000 students, filling Capen Auditorium as head of the biggest class taught at the University. He walks the aisles, learning names, memorizing faces. He studies their names, photos and majors online. If they’re undeclared, he visits them in the lab and talks about becoming a geology major.

Shields connects with students in his rock-filled office, as well as in the Student Fitness Center. He also has a virtual space he created on Second Life to chat with students online during evenings and weekends. He is especially passionate about helping freshmen find their way.

“They come right out of high school feeling like an adult, ready for something,” he said. “Then they come to a class that’s so big they could get lost and feel like nobody cares about them. I want them to know they’re special. I want them to know that there is somebody watching out for them.”
1950s
JimAnn (Smith) Oliver '54 retired as supervisor of research for Westat, a contractor with the U.S. Department of Education. She is teaching immigrants in the Dallas area, one of whom is blind. She resides in Garland, Texas.

1960s
Richard Nimz '62 retired from Illinois Central College as a professor of psychology and education. He also served as an academic adviser. He is involved in his community as a member of an advisory library board, educational foundation and historical societies. He resides in Floresville, Texas.

Karen (Hordesky) Malone '65 is retired from Lincoln-Way Community High School District 210. She resides in New Lenox.

Alberta (Tolson) Smith '66 retired as a resource specialist in the area of special education in the San Juan Unified School District. She resides in Orangevale, California.

Leslie Aguillard '68 is a producing, working and exhibiting artist. She also curates and promotes other local artists. She and her husband, Ferenc Gyalafia, reside in Denver, Colorado.

1970s
James Markese '71, M.S. '74, worked with Abbott Labs in medical diagnostic product development for 32 years before retiring. He previously worked at the University of Chicago Diabetes/Endocrinology Center. He and his wife, Linda, reside in Downers Grove.

Linda (Nielsen) Cochran '73 retired after a long career designing databases for NASA and the U.S. Army. She worked for a short while as a librarian and continues to write science fiction. She and her husband, Joseph, reside in Huntsville, Alabama.

Richard Gordon '73 retired after teaching at the high school level for 32 years in Illinois. He and his wife, Sandra, reside in Little Rock, Arkansas.

Deborah Oberg '73, M.S. '79, is the manager of assessment and admissions at the Human Service Center. She and her husband, Ronald Maier, reside in Bloomington.

Tom Schmal '73 authored a paper published by Munich Personal RePEc Archive in 2018. He resides in Houston, Texas.

Harold Howard '75 is vice president of manufacturing at Western Plastics in Addison. He resides in Streamwood.

Cathy (Switzer) Kemper-Pelle '75, M.S. '80, is serving as the sixth president of Rogue Community College in Grants Pass, Oregon. She previously served as munich academic officer at Lee College, a comprehensive community college near Houston, Texas.

Henry Nash '75, M.S. '79, worked for the State of Illinois as a human services caseworker for 26 years. He also worked in higher education as a career counselor and grant director. He and his wife, Teresa, reside in Palestine.

John Walton '76, M.S. '78, retired as a law professor at Northern Illinois University College of Law. He taught there 23 years and was twice voted Professor of the Year. Prior to teaching he was a litigation attorney. He resides in Batavia.

Marie Garnett '77 retired after 37 years with School District 206. She resides in Country Club Hills.

Pause for applause

Setting the standard
Each year Education Week profiles innovative school district leaders. Among the 13 chosen in 2016 is ISU College of Education graduate Julio Cesar Contreras '01, who overcame obstacles to soar in education. He now supervises six middle and high school principals in Tulsa, Oklahoma.

There are 40,000 students in the district he joined after working in Chicago schools for 11 years, beginning as a teacher. His leadership strategies focus on teamwork, pushing for solutions and realizing everyone has gifts. The son of strong Mexican immigrants, he strengthens school communities through increased parental involvement.

On top at the Trib
Accounting alum Justin Dearborn '91 took on a new challenge this year as CEO of the Tribune Publishing Company, which owns the Chicago Tribune, Los Angeles Times and nine other major daily newspapers. As leader of the second largest newspaper company in the U.S., Dearborn will tackle declines in ad and circulation revenue.

A CPA, Dearborn completed his juris doctorate at DePaul University. Before taking the Tribune's leadership position, he served as CEO of the medical imaging company Merge Healthcare. Dearborn led that firm through a period of growth prior to its acquisition by IBM in a $1 billion transaction last year.

Leading her field
Christine Mitchell-Endsley, Ph.D. '03, earned the 2016 Illinois School Psychologists Association Ted Smith Practitioner of the Year award. Selection as the best among the association's 1,200 members is a statement to the exceptional work Mitchell-Endsley does for the Belleville Area Special Services Cooperative, which serves 24 school districts near St. Louis. She works with individuals from age 3 to 22, helping them handle emotional, physical, academic and family needs. Screenings, assessments, observations, consultations and interventions are all part of the effort to help students reach their full potential. She also teaches at Lindenwood University in Belleville.

Still a country boy
Education major Sam Alex '07 has felt comfortable behind a microphone since his days as a public address announcer for ISU Athletics. He now has a much larger audience as host of “Taste of Country Nights,” a country radio show that broadcasts live from Nashville to more than 75 stations nationwide. His work profiling country music superstars is so stellar that he was recognized by the industry as among “Audio’s 30 Under 30.” He was also nominated by the Academy of Country Music Awards for 2016 National On-Air Personality of the Year.

How we met

So often the reason for choosing a college is a familial one. Raul Rodriguez ‘10, already knew Illinois State pretty well because his brother was an alum.

“I was very familiar with the campus growing up,” he said. “During high school, I stayed on campus for an actuarial science program where we stayed in dorms.”

With Illinois State already his first choice, that clinched the deal. For Nicole Davila ‘12, Illinois State was in her plans early.

“I knew I wanted to be a teacher and that ISU had the best program out there,” she said. “I took a chance and only applied to ISU and one other school. It was such a dream to be accepted to such a great school.”

In fall 2009, both were immersed in college life and studies. Nicole was a bilingual elementary education major active in competitive cheerleading and Spanish club. She chose to study abroad in Mexico and Costa Rica. Raul was studying mathematics for secondary education. He was involved in the Association of Latin American Students, dodge ball club, and working as a resident assistant.

They both became interested in and pledged Alpha Psi Lambda, a coed fraternity. That connection launched a close friendship that in time, became even more.

“ISU gave us the opportunity to meet and become friends,” Raul said.

Fast forward to 2014, just before Christmas. Raul arranged for a big surprise at a Rosemont ice rink. With their loved ones hiding out of sight nearby, he asked Nicole to marry him at center ice. When they skated off the ice, she heard applause.

“He pointed out a large corner of the rink where our friends and family were cheering with signs of congratulations,” Nicole said.

Married July 3 of this year, the newlyweds live in Woodstock. Nicole is a bilingual science teacher at Barrington Middle School. Raul is a bilingual math teacher at Schurz High School in Chicago, where he is also coaching track and field.

While the two say starting a family is not in their immediate plans, they already know where they want their kids to go to college.

“We can’t wait to begin a family tradition of our own of sending our children to ISU,” Raul said.
Teresa (Huth) Dooley ’81 retired after 29 years with Verizon. She was a payroll manager for most of those years. She and her husband, Jim, reside in Bloomington. Melissa (Rosebery) Gross ’81 is a licensed assistant to Tony Calvis with Calvis Wyant Luxury Homes. She and her husband, Steven, reside in Cave Creek, Arizona. Michael Maske ’81 retired from his position as an orbit analyst for GPS. He worked at NGA-St. Louis and resides in Waterloo.

Steve Aughenbaugh ’82 is president and CEO of State Bank in Lincoln, where he and his wife, Sarah, reside.

John Church ’82 is the Midwest region office manager for Rabobank. He resides in Chicago.

Keryn (Temple) Groner ’82, M.S. ’84, is a speech/language pathologist in Northbrook School District 27. She and her husband, David, reside in Skokie.

Misty (Statzer) McGlynn ’82 is a medical secretary. She and her husband, Timothy, reside in Palatine.

Joann (Anderson) Kort ’83 is a principal in Schaumburg School District 54. She resides in Hoffman Estates.

Glynis (Bryan) Gibson ’84, M.S. ’85, is president of Gibson Communications. The public relations/communications firm marks 25 years in business this year. She is an adjunct professor at DePaul University. She and her husband, Walter, reside in Chicago.

Chris Martin ’84 created the health care consulting business Chris Martin Public Relations. He has merged his business with The David James Group, which is a marketing and communications agency. He is vice president of the agency. He and his wife, Julie, reside in Westchester.

Shelly (Walton) Booker ’85 is the director of employment services for the Art Institute of Chicago. She resides in Matteson.

Margaret “Meg” (Zamzow) Wenzelmann ’85 is a resource and vision teacher in Herscher School District 2. She and her husband, Derek, reside in Bonfield.

Christine (Stampar) Book ’86 owns and operates a freelance business that provides public relations, marketing and writing services for nonprofits and small business owners. She and her husband have two adult children and reside in Joliet.

Ann (Beaver) Witting ’86, ’88, completed master’s degrees in education and theatre. She has worked as the director of theatre at TF South High School for 25 years. Her two children, Ethan and Hannah, are attending Illinois State. She resides in Munster, Indiana.

Christopher Zurowski ’86 is the owner and manager of Minuteman Press. He resides in Western Springs.

Jean Chrostoski ’87 is the superintendent of schools in Goshen County School District 1. She resides in Torrington, Wyoming.

Karen (Bushnell) Galey ’87 is a senior loyalty manager with SAS. She and her husband, Mauri, reside in Apex, North Carolina.

Monica Mapel ’87 completed a master’s in security studies, homeland defense and security from the Naval Postgraduate School Center for Homeland Defense and Security in California. She worked as a special agent with the Department of Justice Immigration and Naturalization Service. She is now with the Department of Homeland Security Investigations, working as an assistant special agent in charge in San Antonio, Texas.

Gary Robinson ’87, M.S. ’89, is a solutions manager in the supplier warranty recovery unit of Caterpillar Inc. He and his wife, Amy, reside in East Peoria.

Glen Murschel ’88 is a guitarist and vocalist who has released his debut album, Glen Murschel Twelve String. He resides in Arlington Heights.

Thomas Born ’89 is a pilot at Sun Country Airlines. He is captain on a Boeing 737. He and his wife, Jennifer, reside in Lakeville, Minnesota.

Pam Bremer ’89 is a correctional sergeant with the Cook County sheriff’s office. She resides in Worth.

Peggy (Meyer) Hernandez ’89 is planetarium director of Elgin School District U-46. She and her husband, John, reside in Dundee.

Christine Munch ’89 completed a master’s at Columbia College. She achieved National Board Certification in early adolescence/English language arts. She teaches fourth grade. She and her husband, Paul Peters, reside in Beloit, Wisconsin.

John Palatine ’89 is the owner of Palatine Resort Properties LLC. He traveled to Nepal in the spring to help with reconstruction of a remote village school that was destroyed by the earthquake in 2015. He created a campaign to generate donations for the people there. He trekked to Mt. Everest base camp and placed prayer flags for those who donated. He and his wife, Elizabeth, reside in Oswego.

Michelle (Johnson) Schulz ’89 is a financial associate with Thrivent Financial. She and her husband, Steve, reside in Normal.

Kevin Gramm ’91 is vice president of commercial lending in the Peoria area for Heartland Bank. He and his wife, Sharon, are the parents of two children and reside in Germantown Hills.

Christine (Campos) Bradford ’92, M.S. ’08, is lead E-learning developer at the Illinois Fire Service Institute at the University of Illinois. She and her husband reside in Bloomington.

Chris Burke ’92 has realized his life’s dream with a promotion to the rank of lieutenant in the Chicago fire department. He and his wife, Judy, reside in Chicago.

Carrie Dockendorf ’92 is a senior designer with Townsquare Publications. She resides in Buffalo Grove.

Social at sunset

Although far from campus, a group of Redbirds still find time to gather in Florida. All residents of The Villages, they gathered in the spring to enjoy a sunset and show off the school colors. Group members include, from left, Joan (Lebensorger) Nammari, M.S. ’70; Bruce and Della Davry ’95; Carole (Robert) ’72 and Greg Mroczowski ’71; Cathie (Ozog) ’71 and Jim Conrad ’71, M.S. ’72; and Jerry Heller ’69.

Liz (Lstrup) Lee, Ed.D. ’90, teaches physical education at Hadley Junior High in Glen Ellyn. She also coaches track and field and has for 25 years. She was on the ISU track and field team from 1985-1989 and inducted into the Willowbrook High School Athletic Hall of Fame. She received the Quarter Century Award from the IAHPERD. She and her husband, Howard, are parents of two sons and reside in Winfield.

1990s

August 2016   Illinois State   33
Redbird legacy

Laura Simonton is a two-time alum of Illinois State University. She graduated in 2009 with a bachelor’s degree in history and then earned another bachelor’s in 2011 in history education.

She traces her interest to Illinois State back to an inspiring figure in her family history: her great-grandmother, Laura Jean O’Connell Carney, for whom she is named. Simonton, known as Laura Morrical in these photographs, her great-grandmother Laura Jean O’Connell Carney, for whom she is named.

Laura Simonton is a two-time alum of Illinois State University. She earned a degree in elementary education, and Ron Gillis ’08. He studied mass communications.

In the 1920s, Laura O’Connell became Mrs. Bernard Carney and gave birth to two daughters. But she kept on teaching, and she and her husband made sure their two girls went to college. That’s a family tradition that started at Illinois State more than a century ago. It continues today for Laura Morrical Simonton, her husband Tony and their three kids.

In fact, Simonton said, “My oldest is thinking of attending ISU.”

Eric Minster ’92 is senior media analyst at COUNTRY Financial. He and his wife, Teri, reside in Normal.

Joanne (Brales) Panopoulos ’93 teaches in Community Unit School District 200. She and her husband, John, reside in Glen Ellyn.

John Albers ’94 is an associate attorney with Shay Phillips Ltd. He resides in Williamsville.

Christy (Wager) Malinowski ’94 is director of Christian education at Trinity Lutheran Church. She and her husband, Jeff, reside in Normal.

Martin Hobbs ’95, M.S. ’98, teaches science at East Peoria Community High School. He and his wife, Amy, reside in Eureka.

Gretchen Peters ’95 is vice president of Digital Solutions Group Optum, a Pharmacy Health Services company. She and her husband, Andy, reside in Naperville.

Jason Sauer ’96 is an area executive serving south Texas and Louisiana for Zurich in North America. He resides in Houston, Texas.

Dave Anderson ’97 is director of the 5-Hour Energy commercial. He has performed improv and sketch work with several groups in Chicago, including Rotary Phone, Shuttlecock and Regular Joe, and pH Productions. He has performed improv and sketch in New York, Los Angeles and Toronto. He has also filmed an episode of NBC’s Chicago Med and a 5-Hour Energy commercial. He resides in Country Club Hills.

G. Ben Paxton Jr., WGLT; 3/16

Regular reunion

Six Redbirds who first met while attending Illinois State as undergraduates in the early 1970s keep their friendship alive by reconnecting each year. Since the last of their group graduated in 1974, the members have committed to meeting annually, often in Bloomington’s Miller Park. The group includes, from left, Marcia Freeman ’74 of Hannibal, Missouri; Ellen (Bolton) Leadby ’73 of London Mills; Kerry Frischkorn ’73 of Mundelein; William Leadby ’73, M.S. ’74, of London Mills; and Cheryl (Washburn) ’73, M.S. ’74, and Thomas Stolz ’73, of Effingham.

Friends for life

A friendship sparked while students at ISU in the 1970s remains strong for 13 women, who have met annually for more than 40 years to reminisce about their collegiate days. Rites of Spring is just one fond memory they will never forget. They are, seated from left, Mary (Henning) Tobias ‘79 of Barrington; Kendra (Knudtzon) Fischl ‘79 of Libertyville; Teri (Mullen) Lodesky ‘79 of Naperville; Georgette (Koszczuk) Schroeder ‘79, M.S. ‘80, of Bensenville; Sharon (Georgeoff) Frys ‘79 of Palatine; and Gayle (Kras) Carzoli ‘79 of Itasca. Standing from left: Sue Widman ‘80 of Darien; Carol (Burklach) Roehr ‘80 of Grayslake; Janet (Lindner) Hurt ‘79 of Keokuk, Iowa; Sue (McKinzie) Westphal ‘79 of Yorkville; Sheila (Diener) Brown ‘79, M.S. ‘04, of Bourbonnais; Ann (Geimer) Wright ‘80 of Tinley Park; and Cindy (Swanson) Pembroke ‘79 of Western Springs.

Three easy ways to submit your information

1) Go online to Alumni.IllinoisState.edu/ClassNotes and click on “class notes.” Information submitted using this method will also be posted online.
2) Email your news to sjblyst@IllinoisState.edu.
3) Mail your news to Class Notes(2,3),(733,691)

For additional information, contact Alumni Relations at (309) 438-2586 or (800) 366-4478, or by email at alumni@IllinoisState.edu.
SECURITY for you today
A BRIGHTER FUTURE for tomorrow’s Redbirds

By funding a Redbird Charitable Gift Annuity with a gift of cash or securities, you can receive secure, lifetime payments and the satisfaction of investing in the Redbird family. Proceeds can be designated to support your passion. The annuity is easy to establish and can provide YOU additional benefits:

- **Income tax savings**
- **Capital gains tax avoidance**
- **Possible tax-free payments**

Call (309) 438-7681 or email plannedgiving@IllinoisState.edu for a detailed, no-obligation explanation of your Redbird Charitable Gift Annuity.

Alumni Update 
Update your information online at Alumni.IllinoisState.edu/myinfo

WHAT YOU CAN DO
for ILLINOIS STATE UNIVERSITY

SHARE
your Illinois State story.

BRAG
about Illinois State
to everyone around you.

WEAR RED
ON FRIDAY
to show your support
of Illinois State.

STAY CONNECTED
by joining alumni networks
and attending events where
you reside.

ENCOURAGE
high school students
to visit campus.

COME BACK
to visit campus or
speak to a class.

GIVE BACK
at any level, supporting
your campus passions.

MENTOR
student interns
at your place of business.

Tell everyone you are #REDBIRDProud
Energized

There is always an energy at the start of the academic year. Students show their enthusiasm during Welcome Week at events that include the annual Glow It Up. Dancing, food and items that glow in the dark make for a night of fun offered by University Program Board’s Up Late at State, which provides late-night fun free of alcohol.
